

DISCOVERY HOMEWORK

Living Things And Their Habitats

This term in science we are learning about living things and their habitats.

Due date: Wednesday 5th October (this homework is optional but if your child would like to do this, it should be brought in on this date and not before please).

Suggested activities:

- Find out about which animals live in our local area
- Think about which areas locally have lots of animals living in them and why (E.g. why do more animals live in the park than on the main road?)
- Go for a walk and record (in writing or pictures) what animals you see
- Find out about animals that live in different habitats (rainforests, the desert, the Arctic etc)
- Draw or paint a picture of an animal which lives in our local area
- Create a poster to show what you have learnt at school.

Please remember:

- ★ Your child MAY choose to do one of the suggested activities or they MAY want to do something else that links to the topic.
- ★ It could be some written work, some art or DT, some music - anything goes really, as long as it links to the theme. It may be something new that they are learning about their topic or it may help to reinforce something that they have learned in class.
- ★ This work does NOT go in homework books - these books are for the practice of basic skills.
- ★ The topic may have finished by the time the due date comes around - THIS DOES NOT MATTER - anything that they do at home will help to reinforce skills, develop their knowledge and hopefully they will enjoy doing it too!
- ★ The homework may be completed over time - ie. a little and often approach or your child may prefer to do something in one or two sittings - either way, it should not be handed in until the date at the top of this page.
